

# NEW AQUAREA DHW

## AQUAREA

# Panasonic

UP TO 75%  
ENERGY SAVINGS

## New Aquarea DHW

Pressurised

High-Quality insulation

Fast heating

Air ducts

Additional heating source

Electronic regulation with touch screen

Indirect tubular air heating element

Vertical floor mounting

External exchanger

Magnesium anode corrosion protection

## New Aquarea DHW

DHW tank with built-in heat pump.

The heat pump is one of the most energy efficient and cost effective methods of producing hot water. The pump installed on the storage tank takes energy from the surrounding air and uses this supplementary source to heat the water up to 55 °C.

The new designed DHW is ready to achieve levels of high efficiency even at temperatures as low as -7 °C. With 208, 276 and 295 L volumes of hot water capacity, with this range it is possible to connect additional heat source such as solar energy. The heat pump cools and de-humidifies the air pumped either from outdoors or from within the building. By choosing the point of air capture and exhaust, you can ventilate and de-humidify some rooms, while extracting the cooled air either into the environment or into another room that you want to cool.

### Advantages of the new Aquarea DHW

High-technology rotational compressor ensures higher energy efficiency and a higher coefficient of performance, which means major energy savings – up to 75 %.

Wrapped around the inside of the outer cover of the tank, it prevents the build-up of limescale, extends the useful life of the equipment and improves safety.

The dimensions and heating capability of a medium volume Aquarea DHW tank can easily replace an existing electric water heater. Its small size allows it to be installed in spaces where previously a conventional electric water heater would be installed.

Impressive tank protection is provided through the use of superior super-clean enamel and a large magnesium element. These ensure durability even in the harshest operating conditions without harmful additives in the water.

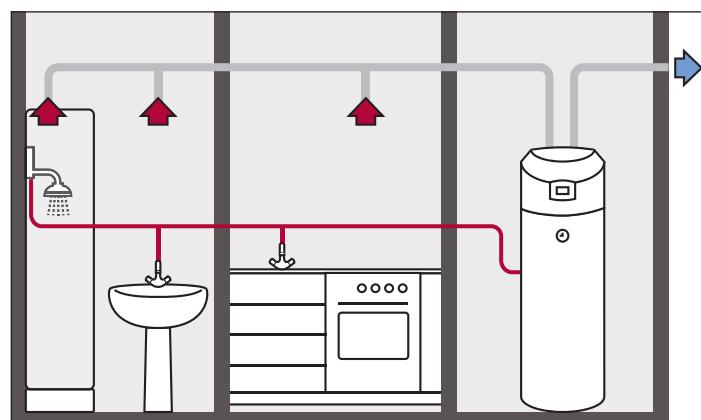

User-friendly electronic controller with LCD touch screen display on Aquarea DHW:

- Temperature settings and display
- Time and day settings and display
- Display of available hot water
- Time and day programming
- Fast heating "TURBO" mode
- Heating on higher temp. (75 °C)
- Setting a several day absence
- Independent ventilation function
- Error diagnostic

Modern buildings are characterized by tightly sealed windows and doors, and efficient wall insulation. Aquarea DHW makes it possible to ventilate the home while using the exhaust hot air for the heating of domestic water at the same time. Cool air can be piped out of the building or into any part of the home that requires cooling. Aquarea DHW design further serves to preserve the functionality of the room in which it is installed.

Example of ventilation with air ducts connection to Aquarea DHW

## Why choose a Panasonic DHW tank?

### Clear savings

- 75 % free energy thanks to the heat pump
- COP up to 3,39 (according to EN 16147)
- Certified products ensuring higher performance levels
- 65 mm of high density polyurethane insulation to limit heat losses

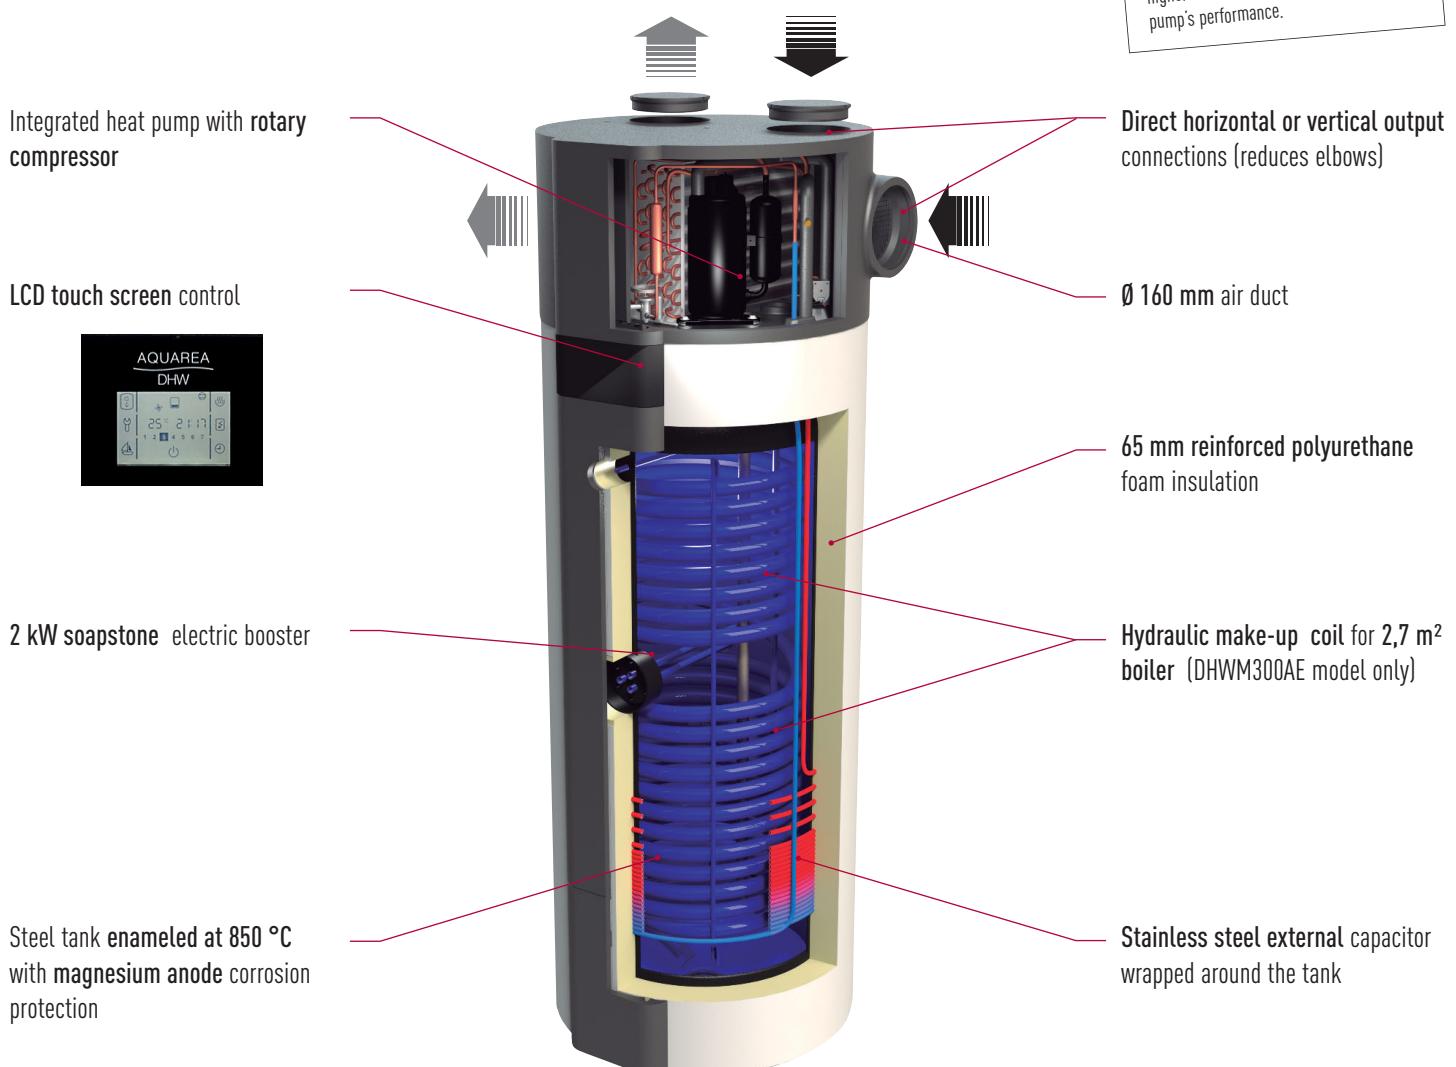

### Easy integration

- Fully compact solution (only 1,54 m high for the 200L model)
- All-in-one solution with integrated heat pump

### Abundant domestic hot water

- Quick tank refill thanks to the heat pump
- The "Turbo" and "Hot" functions ensure even more domestic hot water when needed
- The touch screen shows how much hot water is left to accurately track your consumption

## DHW tank in detail
